MB-DAL

Metaphase Diffused Axial Lights use beam-splitter technology to radiate homogenous, coaxial illumination in line with the camera aperture. Diffused coaxial lighting eliminates dark spots or shadows inherent in other forms of illumination and allows the camera to be placed at a longer working distance. Equipped with multiple tapped holes for mounting, the MB-DAL can be easily integrated into existing vision systems. An advanced thermal management system ensures a long lifetime and cost effectiveness. The MB-DAL is also available with strobe and dimming options.

FEATURES

- Exclusive optical beam splitter and diffuser stack
- Multiple tapped holes for ease of mounting
- Thermal management affords cost effective design
- Optional dust cover protection available
- Very high intensity with ±5% uniformity
- High Density Precision Chip Technology (HDPCT)
- Built-in Constant Current Driver with 0 10VDC intensity control
- Compatible with DDC-3 and ILD-35 Dimmers
- Flicker free performance and instant start up with Metaphase analog driver technology
